

Please tell me why something that you and I pay for (XM Radio) from a private business (XM Radio) can't offer local weather and traffic and other services without some other company trying to stop it from doing so. How or why is it anyones responsibility to stop someone from enjoying something that is paid for and provided from a private company. Last check I believe we live in a free society and as long as it isn't illegal (murder,rape,stealing,etc.) it shouldn't be regulated by a group of broadcasters who plainly don't want competition. Competition is what makes everything affordable and keeps technology on the cutting edge.
